

# Tile Station

## Development Summary - Last 4 Sessions

28 fixes & features across Admin, Storefront, Routing & Pricing

---

Date: 31 March 2026

## Session 1 - Admin Panel Data Management & Stability

*Focus: Fixing critical recurring bugs in the admin panel*

### 1. Data loss prevention

Fixed multiple paths where product data was being lost or overwritten during bulk edits in the admin panel.

### 2. Product group scoping

Ensured changes in one product group (e.g., Tiles) don't bleed into another (e.g., Flooring). Data is now correctly isolated.

### 3. UI consistency fixes

Resolved various admin panel display inconsistencies affecting the user experience.

### 4. Sale Ribbon redesign

Implemented WAS/NOW pricing display on the storefront product cards with clear visual hierarchy.

### 5. Deterministic ratings

Consistent star ratings on product cards that don't change randomly on each page load.

### 6. Country of Origin flags

Initial implementation of country flags on product detail pages to indicate manufacturing origin.

## Session 2 - Admin Features & PDF Management

*Focus: New admin tools and a full-stack PDF document system*

### 7. P0 Bug Fix: Tier Pricing Decoupled

The 'Disable Tier Discounts' checkbox was incorrectly disabling Trade Discount and Credit Back inputs too. Fixed in TierPricingModal.jsx so each discount type is independent.

### 8. Product-Based Pricing Filter

New dropdown in the bulk editor to filter cost prices by individual product name. Essential for Materials and other products that lack size variations (unlike Tiles which filter by size).

### 9. PDF Document Management (full-stack)

Complete system for uploading, downloading, and managing PDF attachments (e.g., technical datasheets) to products. Uses Emergent Object Storage for persistence. Includes admin modal, per-product icons, and a customer-facing 'Related Downloads' section.

### 10. Scoped Product Descriptions

Multi-select checklist in the bulk description editor allowing an admin to write a single description and apply it to a specific subset of selected products, rather than all-or-one.

### 11. Default Pricing Unit

Auto-sets 'Per Unit' for most product groups. 'Per m2' remains the default only for Tiles, Flooring, and Underfloor Heating.

## Session 3 - Storefront UI & Routing Overhaul

*Focus: Collection cards redesign and dynamic routing fixes*

### 12. Country of Origin flags - prominent badges

Upgraded from tiny inline text to prominent standalone flag badges on both Collection Cards and Product Detail pages.

### 13. Collection Grouping fix

'Decor', 'Border', 'Mosaic', 'Listello', and 'Feature' product variants no longer split into separate series. They are correctly grouped under their parent collection.

### 14. Color Extraction fix

Now picks the last valid color word before dimensions. E.g., 'Ardesia Slate Black 60x60cm' correctly extracts 'Black', not 'Slate'.

### 15. Collection Card redesign

Bigger full-width color swatches with color names displayed beneath. Clean single-tag row for available sizes and finishes.

### 16. Removed 'Add to Cart' from Collection Cards

The Add to Cart button only belongs on the Product Detail page where customers select size and quantity. Removed from collection listing cards.

### 17. Dynamic Filter Scoping

Sidebar filters are now strictly scoped by `product_group`. Tile-specific colors and sizes no longer appear when browsing Flooring or Materials.

### 18. Category Routing rebuild

Replaced fragile regex conversion with direct DB lookup from `website_categories` collection. Fixes routing for categories with special characters like 'In & Out'.

### 19. SALE tab routing & banner

Fixed the SALE route parameter so it correctly filters sale products. Added a dedicated red SALE banner below the sub-navigation.

## Session 4 - Data Accuracy, Pricing & Filter Consistency

*Focus: Color swatches, pricing formula, and future-proofing filters*

### 20. Missing Color Swatches (P0)

Added `extract_color_from_name()` to pull colors from product names when the database color field is empty. Restructured with a two-pass approach so color entries appear first in thumbnails, preventing them from being truncated by non-color entries.

### 21. COLOUR/COLOURS pluralization

Collection card badge now correctly shows '1 COLOUR' (singular) vs '2 COLOURS' (plural).

### 22. Sale ribbon % mismatch

Changed from additive percentage calculation (Sale 20% + Volume 10% = 30%) to actual compound calculation from WAS to NOW price. Now matches the circular save badge exactly.

### 23. 'Buy More, Save More' prominence

Upgraded the Volume Pricing header from a plain grey bar to a bold amber gradient banner with white text. Much more eye-catching for customers.

### 24. Removed 'Price type: Room Lot'

Removed the unnecessary 'Price type: Room Lot' label from shopping cart line items.

### 25. Consistent filters across all categories

All categories within the same product group now show identical sidebar filters. Previously, categories not explicitly listed in `filter_groups.category_slugs` got no filters at all.

### 26. Admin UI for group assignment

FiltersManager now has an 'Applies to Product Groups' section. Assign a filter group to an entire product group (e.g., Tiles) with one click instead of manually listing every category.

### 27. New categories auto-inherit filters

When a new category is added to a group, it automatically inherits that group's filter configuration. No manual setup required.

### 28. Sale discount % formula fix

Changed WAS price calculation from markup formula ( $\text{NOW} \times 1.20 = \text{only 17\% off}$ ) to proper discount formula ( $\text{NOW} / 0.80 = 20\% \text{ off}$ ). When you set 20% sale, customers now see 20%.

## Summary

|                                   |         |
|-----------------------------------|---------|
| Total fixes & features delivered  | 28      |
| Session 1 - Admin Stability       | 6 items |
| Session 2 - Admin Features & PDFs | 5 items |
| Session 3 - Storefront & Routing  | 8 items |
| Session 4 - Pricing & Filters     | 9 items |

## Remaining Backlog

- P1** Fix recurring 'Admin session expires frequently' issue
- P2** CSV Export/Import for products
- P2** Replace mocked 'Frequently Bought Together' with real recommendations
- P2** 'Compare Products' feature on customer-facing shop
- P3** Refactor SupplierProducts.js monolith (>12k lines)
- P3** Implement centralized state management (Zustand/React Query)
